## Appendix E: SIP Evaluation Factors

### PRODUCTIVITY (50% OF TOTAL WEIGHT)

<table>
<thead>
<tr>
<th>Evaluation Factor</th>
<th>Measure</th>
<th>Weight</th>
</tr>
</thead>
</table>
| **Existing Population**           | **Local Routes:** Measure based on 2010 population density by census block within 1/4 mile of boarding section of a route. High= More than 10 persons per acre  
                                        Medium= 5-10 persons per acre  
                                        Low= Less than 5 persons per acre  

**Commuter Express Routes:** For routes that are only served by a park and ride, measure is based on 2010 population count of the census blocks included in facility's travelshed. For routes with only a local pick-up segment, measure is based on 2010 population count of the census blocks within 1/4 mile of the origin section of the route. For routes with both a park and ride and a local pick-up segment, this measure includes both the 2010 population count of the census blocks included in facility's travelshed and within 1/4 mile of the origin section of the route. Reverse commute express routes are not evaluated.  
                                        High= More than 100,000 persons  
                                        Medium= 50,000-100,000 persons  
                                        Low= Less than 50,000 persons | 20 pts |
| **Existing Employment**           | **Local Routes:** Measure based on the job density within 1/4 mile of the boarding section of a route. High= More than 30 jobs per acre  
                                        Medium= 10-30 jobs per acre  
                                        Low= Less than 10 jobs per acre  

**Commuter Express Routes:** Measure based on the job count within 1/4 mile of the destination section of a route. High= More than 60,000 jobs  
                                        Medium= 20,000-60,000 jobs  
                                        Low= Less than 20,000 jobs | 10 pts |
| **Job Concentration Areas**       | Measure based on the number of Thrive MSP 2040 Job Concentration Areas along the boarding section of a local route or destination section of a commuter express route. Major Concentrations= 3 pts. Regional Concentrations=2 pts. Sub-regional Concentrations=1 pt.  
                                        High= More than 5 points  
                                        Medium= 3-5 points  
                                        Low= Less than 3 points | 10 pts |
| **Productivity per In-Service Hour (Productivity)** | Measured in proportion to regional standard for service type. High= Above regional **system** average for service type  
                                        Medium= Above regional average **standard** for service type  
                                        Low= Below regional average **standard** for service type | 25 pts |

The "regional system average" is calculated as the total passengers across all routes divided by the total number of in-service hours. The "regional route average" is calculated as the sum of the passengers per in-service hours for each route divided by the total number of routes.
<table>
<thead>
<tr>
<th>Evaluation Factor</th>
<th>Measure</th>
<th>Weight</th>
</tr>
</thead>
</table>
| **Subsidy per Passenger** | Measured in proportion to regional standard for service type.  
High= Better than 75% of the regional system average for service type  
Medium= Better than 150% of regional route average for service type  
Low= Worse than 150% of regional route average for service type | 20 pts |
| **Intersection Density** | Number of intersections per route mile within 1/4 mile of boarding section of route. Factor does not apply to commuter express routes. Intersections are weighted based on the number of street directions that come together: 5 or more directions=3pts. 4 directions=2 pts. 3 directions=1 pt.  
High= More than 80 intersections per route mile  
Medium= 50-80 intersections per mile  
Low= Less than 50 intersections per mile | 10 pts |

**SOCIAL EQUITY (25% OF TOTAL WEIGHT)**

<table>
<thead>
<tr>
<th>Evaluation Factor</th>

</thead>
</table>
| Low-wage jobs | Measure based on the count of jobs paying less than $40,000 annually within 1/4 mile of the boarding section of a local route or within ¼ mile of the destination section of a commuter express route.  
High= More than 26,000 jobs  
Medium= Between 13,000-26,000 jobs  
Low= Less than 13,000 jobs | 20 pts |
| Service to Low-Income Populations | Measure based on comparison of population within 1/4 mile of boarding section of a local route or within 1/4 mile of origin section of a commuter express route served by proposed service improvement to the overall population within Metro Transit service area.  
High=Percentage of low-income persons exceeds 150% of average for Metro Transit service area  
Medium= Percentage of low-income persons exceeds service area average (100%-149%)  
Low= Percentage of low-income persons is lower than service area average. | 20 pts |
| Service to Persons of Color | Measure based on comparison of population within 1/4 mile of boarding section of a local route or within 1/4 mile of origin section of a commuter express route served by proposed service improvement to overall population within Metro Transit service area.  
High=Percentage of persons of color exceeds 150% of average for Metro Transit service area  
Medium= Percentage of persons of color exceeds service area average (100%-149%)  
Low=Percentage of persons of color is lower than service area average. | 20 pts |

Metro Transit service area average is 11.3%  
Metro Transit service area average is 27.7%
**Service to Disabled Populations (Age 5 and older)**

Local Routes: Measure based on comparison of population within 1/4 mile of boarding section of a local route or within 1/4 mile of origin section of a commuter express route served by proposed service improvement to overall population within Metro Transit service area.

- **High:** Percentage of disabled persons exceeds 150% of average for Metro Transit service area
- **Medium:** Percentage of disabled persons exceeds service area average (100%-149%)
- **Low:** Percentage of disabled persons is lower than service area average.

Metro Transit service area average is 9.7%

---

**Auto availability (Age 16 and older)**

Local Routes: Measure based on comparison of population age 16 or older without a vehicle within 1/4 mile of boarding section of a local route or within 1/4 mile of origin section of a commuter express route served by proposed service improvement to overall population age 16 or older within Metro Transit service area. Routes that are served only by a park and ride will score a low.

- **High:** Percentage of persons without a vehicle exceeds 150% of average for Metro Transit service area
- **Medium:** Percentage of persons without a vehicle exceeds service area average (100%-149%)
- **Low:** Percentage of persons without a vehicle is lower than service area average.

Metro Transit service area average is 22%

---

**SYSTEM CONNECTIVITY (25% OF TOTAL WEIGHT)**

<table>
<thead>

</thead>
</table>
| **New Populations Served** | Measure based on the number of people served by a new route or extension of an existing route within 1/4 mile of boarding section of a local route. For commuter express routes that are only served by a park and ride, measure is based on the 2010 population count of the newly served census blocks included in facility's travelshed. For commuter express routes with only a local pick-up segment, measure is based on 2010 population count within 1/4 mile of the origin section of a new or extended route. For routes with both a park and ride and a local pick-up segment, this measure includes both the count of the newly served census blocks included in facility's travelshed and within 1/4 mile of the origin section of the new or extended route. Reverse commute express routes and projects that do not serve new areas will not be evaluated.  
  - **High:** More than 10,000 persons  
  - **Medium:** Between 5,000-10,000 persons  
  - **Low:** Less than 5,000 persons | 20 pts |
| **Key Destinations Served** | Local and Reverse Commuter Express Routes: Measure based on the number of key destinations served within 1/4 mile of boarding section of a route. Commuter express routes are not evaluated. 1 pt. per destination. Due to the high concentration of destinations, the U of M and downtown Minneapolis and St. Paul will receive a group score for these areas. Downtown Minneapolis=50pts. Downtown St. Paul= 30 pts. U of M= 15 pts. (based on relative number of key destinations)  
  - **High:** More than 160 points  
  - **Medium:** Between 80-160 points  
  - **Low:** Less than 80 points | 15 pts |
| Connecting Routes | Local and Reverse Commuter Express Routes: Measure based on the number of transit routes served along the boarding section of a route. Commuter express routes are not evaluated. Green, Blue, Red, Orange (I-35W South), Gold (Gateway), Blue Line extension (Bottineau) and Green Line extension (Southwest) are each worth 3 pts. Routes in the high frequency network are worth 2 pts. Other local and express routes are worth 1 pt. per connecting route. Due to the high concentration of destinations, the U of M and downtown Minneapolis and St. Paul will receive a group score for these areas. Downtown Minneapolis=6 pts. Downtown St. Paul= 3 pts. U of M= 2 pts.  
High= More than 32 points  
Medium= Between 16-32 points  
Low= Less than 16 points | 15 pts |
| Educational Institutions | Measure based on the number of Thrive MSP 2040 Educational Institutions within 1/4 mile of the boarding section of a local route or within 1/4 mile of the destination section of a route. Educational Institutions are weighted by the number of completers: > 1000 completers=3 pts. 500-999 completers=2 pts. <500 completers = 1 pt.  
High= More than 6 points  
Medium= 2-6 points  
Low= Less than 2 points | 10 pts |
| Off-peak, Span of Service, Reverse Commute | Measure based on whether a project provides additional off-peak service, widens the span of service, and/or includes reverse commute service. 1 pt. per improvement category.  
High= 3 points  
Medium= 1-2 points  
Low= 0 points | 10 pts |

Weekday, Saturday and Sunday scores are assigned separately, then a combined score is determined. When scores differ by service day, the overall score is generally the weekday score. If however, the weekday score is lower than the weekend but close to the threshold between scores, the overall score may instead be the same as Saturday or Sunday.

Downtown Minneapolis and St. Paul are defined by the downtown zone boundaries. The U of M- Minneapolis campus is defined as the area on the East and West Bank owned by the University.

For commuter express routes, "origin" is defined as the home-based section of the route and "destination" is the employment or school-based section of the route. “Travelshed” is defined as a 2.5 mile buffer surrounding the park and ride in all directions.

For measured evaluated using a buffer, if any part of the TAZ, block or block group is included then the whole geographic unit is included.
