Lake Street Station: Towards 60% Design
Lake Street Station: Towards 60% Design
Lake Street Station: Towards 60% Design
Lake Street Station: Towards 60% Design
Lake Street Station: Towards 60% Design
Concept A - Northbound

- Re-entry into traffic could be an issue
- Could use TSP
- Could be expanded if needed long term
66th Street Station: Conceptual Design

Concept B - Northbound

- Easier to get across intersection
- Further from local service
Concept C - Southbound

- Same issues as Concept A
- Southbound to westbound does stack up
- Need additional observations on right turns
Concept D - Southbound

- Eastbound to southbound free right – ped conflicts?
- Pushing platform south is not ideal for a pedestrian
Concept A - Northbound

- New platform adjacent to transit center
- Easy on/off for buses
- Constraints with ROW and cars exiting freeway
- Takes WB peds out of their way, may need a sidewalk between Aldrich and 35 W
Concept C - Southbound

- Easy on/off for buses
- Further away from SBTC
- Closer to transit destinations to the west.
- Standalone stop vs. a transitway
  - Is this easy to use?
- Need ped connection to work
- Who is the audience?
Concept E - Southbound

- Creates a visual connection between platform and SBTC
- Possible ped issues
- Rework exit ramp turn lane locations, expand pork chop
- Better for Normandale?
98th Street Station: Conceptual Design

Concept H - Southbound

- Southbound uses adjacent or same platform as northbound
- Rider convenience?
- Time penalty of getting over to SBTC and getting back on freeway
American Boulevard Station Options

Criteria
- Transit Station
- Transit Operations
- Transit Users

Locations
- Station(s)
- Alignment
- Park and Ride
American Boulevard Half-Mile Walkshed
